Pancreas damage can lead to a number of serious health problems, including:

- Pancreatitis is an inflammation of the pancreas. It can be caused by a variety of factors, including gallstones, alcohol abuse, and certain medications. Pancreatitis can be a life-threatening condition if it is not treated promptly.

- Diabetes is a chronic disease that occurs when the body is unable to produce or use insulin. Insulin is a hormone that helps glucose, or sugar, get from the blood into the cells. Diabetes can lead to a number of serious health problems, including heart disease, stroke, kidney failure, and blindness.
- Pancreas cancer is a type of cancer that starts in the pancreas. It is one of the most deadly types of cancer, with a five-year survival rate of less than 10%.
